

CONCERNED ABOUT TICKS?

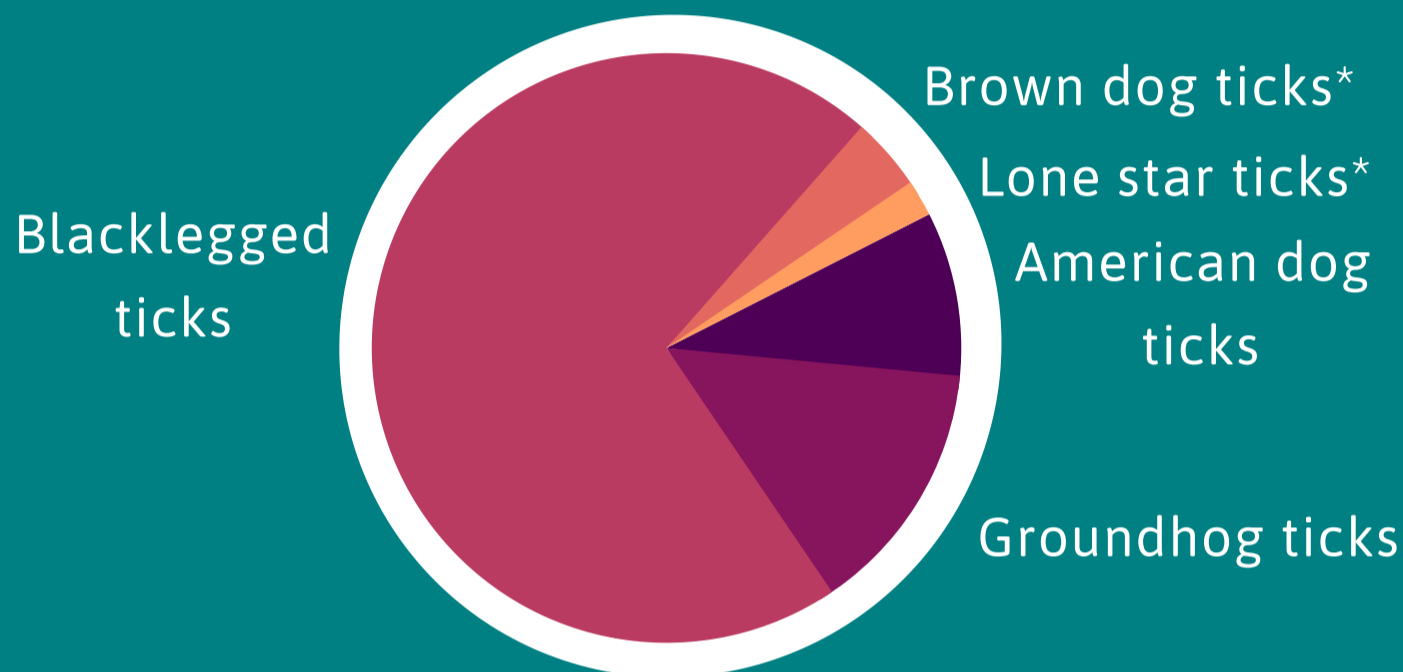

MUST-KNOWS FOR PET OWNERS IN QUÉBEC

Ticks were submitted for 1 year (2019-2020) from 10 veterinary clinics across Québec. These findings provide a snapshot of ticks in the region and highlight general patterns.

What tick species were submitted?

number of ticks = 438

*related to out of country travel

Who was bitten?

The majority of ticks were reported on dogs; however,

1 in 4 ticks were reported on cats.

Make sure to keep both your canine and feline friends in mind when thinking about tick prevention!

When were ticks active?

85% of ticks were reported in the spring (May - June) and fall (October - November).

Tick risk can be present throughout the year if temperatures are above freezing.

Where did ticks bite?

60% of ticks were found on the head, ears, and shoulders.

Pay special attention to these areas when conducting your tick check!

Why are we concerned?

25%

of blacklegged ticks were positive for *Borrelia burgdorferi*, the bacterium that causes Lyme disease. This is based on 221 pooled samples.

How do I protect my pet?

- ✓ Use a veterinarian-prescribed tick preventive
- ✓ Perform daily tick checks (don't forget to check yourself!)
- ✓ Speak with your veterinarian if you are travelling
- ✓ Avoid areas with higher risk of ticks, such as wooded areas and long grass
